Other Functions

Academic Office
Ver.20240301

Other Functions

- APU has not made detailed manuals for these functions, but they are included in the default functions available on APU Moodle, so we would like to give a brief overview of how they can be used.

- If you would like more information on how to use these functions, please check the information on Moodle Docs or search Google.
  - The APU Academic Office and Information Systems Office do not offer support for these functions.
  - You are responsible for your use of these.

- Reference site:
  - Moodle Docs

Other Functions

Function	Description	Function	Description
Wordcloud	Simple text mining function. It shows words entered by students, and more common words are shown larger and in color. Ref: Moodle.org 	External Tool	A function for connecting to LTI-compliant Learning resources. APU Moodle is already connected to Zoom and Panopto, so you do not need to use this function.
Glossary	The glossary is a list of words and their definitions. Normally, instructors set up glossaries for their students, but Moodle's glossary is not one-way only – students can also edit or add words to the glossary. Ref: Moodle Docs (External Link)	Lesson	This function allows you to set up multiple branching exercise pages. Ref: Moodle Docs (External Link)
Database	You can work together with students to collect information on set topics. When creating a database, the instructor must first create a database template, then students can enter the required information. Ref: Moodle Docs (External Link)	Custom Certificate	You can generate fully customized dynamic PDF certificates through your browser. Ref: Moodle Docs (External Link)
Wiki	A tool that allows multiple participants to create one article. You can use this for group study. Moodle has two types of wikis – "Joint Wiki" and "Individual Wiki." In individual wikis, one participant works to create one article. In joint wikis, all participants or selected groups can work on one article. Ref: Moodle Docs (External Link)	Survey	A function for responding to preset surveys in Moodle in set formats (validated survey methods such as COLLES (Constructivist Online Learning Environment Survey) and ATTLS (Attitudes to Thinking and Learning Survey)).
